S2														x			42	M	R	L Frontotemporal	L Temporal
S3														x			33	F	R	R Frontotemporal	R Temporal and orbitofrontal
S4														x			18	F	R	L Frontoparietal	L Frontal

Please note that electrode montages are not necessarily the same for the same patient from task-to-task:

1) sometimes different montages were used for different tasks because of limited number of amplifier channels (when one of the amps was getting repaired, etc)
2) some patients had more than one surgery (e.g. bitemporal strips, then return for unilateral grid)
3) the particular analysis used focused down to one region, and the remainder of the data in raw format were not preserved.
